

Interzero makes a demonstrable contribution to both **environmental and climate protection**

Customised resource protection certificate

Quality that you can rely on

We reliably take back your used packaging. This promise is backed up by our consistent quality management. Our integrated management system ensures quality, environmental, energy, occupational health and safety standards that are certified according to DIN EN ISO 9001, DIN EN ISO 14001, DIN EN ISO 50001 and DIN ISO 45001.

Expert handling based on clear guidelines

We take back your commercial packaging where it actually accumulates – at your customers' premises, thereby fulfilling the legal requirements. With the registration of your packaging, which we confirm with our recycling certificate, you can prove to your customers that you participate in our take-back systems for commercial packaging.

About Interzero

Interzero is one of the leading environmental service providers in the field of closing product, material and logistics cycles and innovation leader in plastics recycling with the largest sorting capacity in Europe. Under the guiding principle of „zero waste solutions“, we advise over 20.000 customers throughout Europe on the responsible handling of recyclable materials, thus helping them to improve their own sustainability performance and conserve primary resources.

zero waste solutions

The take-back and recycling of transport packaging and other commercial waste packaging

Efficient solutions for all industries from the number 1 in the market – nationwide, highly efficient and sustainable

Comprehensive recycling with the know-how of the market leader

We turn recycling into your competitive advantage

Packaging protects your products against environmental influences – and this protection is indispensable. To limit the impact of your packaging on the environment, the legislator stipulates obligations that you are required to follow. As a pioneer in the return and recycling of commercial packaging, Interzero is your reliable partner to help you master this challenge – so that the raw materials from your packaging stay in the recycling loop.

Interzero has been operating innovative take-back and recycling solutions for commercial packaging made from all materials across Germany for over 30 years.

Each year, we coordinate approximately 2 million collections throughout Germany for more than 4,000 customers in over 20 industries. This way,

we ensure that your packaging is taken back at your customers in industry, retail trade and commerce in an uncomplicated manner. As a manufacturer and distributor, you register your packaging for its disposal in our take-back systems for commercial packaging waste. This means that you no longer have to worry about complex logistics processes or increasing administrative costs – and your customers will be delighted with customised waste management strategies.

Performance-based billing instead of fixed-rate payments

Our price-performance ratio is fair: We only charge for the amount of packaging that you actually bring into circulation. We do not work with waste disposal fees, which are charged on the basis of your turnover and unrelated to the service provided.

Sustainable recycling instead of hot air

Under certain conditions, the recycling requirements regarding used packaging stipulated by the German Packaging Act can also be fulfilled through energy recovery. In contrast, Interzero stands for innovative, sustainable and customised recycling as well as loop management from one single source – increasingly digitally. For more sustainability in the use of resources.

Closing material loops efficiently and securing raw materials

Well connected with Interzero

Regardless of where the used commercial packaging arises in Germany: With a comprehensive recycling and logistics network consisting of approximately 600 certified waste management partners, Interzero organises regular disposal at more than 100,000 collection points of commercial packaging waste, as well as the resource-conserving recycling. This also applies to completely emptied containers of all types of packaging-material – including those containing hazardous content. And all this according to the highest standards of quality.

You simply tell us the type and quantity of your commercial packaging and inform your customers about the participation in our take-back systems – and we arrange everything else directly with your customers, who can rely on a smooth process throughout Germany.

Customised solutions instead of standard

Do you use custom packaging which is made from unusual materials or comes in special shapes and sizes? We look forward to the challenge and will gladly develop the optimal take-back solution for you.

Interzero also develops and organises innovative take-back and logistics solutions for product residues and used goods

Whether it is repair, recycling, return to your production systems or professional disposal: We bundle material flows and optimise the recycling processes in cooperation with you. Together, we are succeeding in closing more and more recycling loops and saving raw materials.

The “Made for Recycling” service for commercial packaging such as transport packaging

Sustainability starts with a recycling-friendly packaging design. A high degree of material purity and little to no impurities or sticky residues are also important requirements. We advise you on the optimal recycling capability of your packaging. In doing so, we analyse the packaging and provide you with detailed recommendations for action. The existing packaging technology is taken into account as well as the specific requirements regarding the product protection and transportability.
