

Sustainable take-back and logistics solutions for your products

Together with our customers, we develop and organise take-back and logistics solutions for product residuals and used products of all kind. Whether repair, recycling, return or professional waste management – we will find the optimal recycling solution for you.

Interzero develops nationwide take-back systems, organises logistics flows and manages service provider networks. From construction to gastronomy to healthcare, we support manufacturers from all industries. Thanks to our specific know-how and nationwide network in the areas of logistics and recycling, we are your competent partner in the development and implementation of proper recycling solutions.

Digitalisation at the highest level

To ensure the traceability of single products and material flows, we rely on a high degree of digitalisation.

In the process, we coordinate the entire reverse logistics system with your individual needs so that effective, circular value creation is possible.

Cost efficiency in all steps

A key factor is the cost efficiency of the integrated take-back systems. This is the way to preserve raw materials and return products to the loop.

You have product residuals or used products? We support you on the way to your sustainable solution!

Sound analysis as the basis for your recycling strategy

Regardless of whether it's a material, single components or a finished product - we analyse your initial situation in terms of reverse logistics and waste management.

Customised solutions are our strength

We take an open-minded approach to finding the right solution for you: repair, recycling, return to your own production or professional waste management. We advise you along the entire supply chain and together we implement the optimal recycling solution.
