zero waste solutions

The **REPASACK system** for **taking back paper sacks**

Make a measurable
contribution to climate protection
and show it to your customers.

A pioneer in the collection and recycling of **paper sacks**

Join the market leader's organised take-back and recycling system for used kraft paper sacks.

Experience you can rely on.

For 35 years, Interzero Repasack has been organising the take-back, sorting and recycling of used paper sacks. At our own recycling facility, the sacks are processed using our proprietary, patented recycling method. This allows suitable paper fibres to be recovered as a high-quality recycled raw material for use by paper mills in the production of new paper products.
By participating in the REPASACK system, you help ensure that suitable paper fibres are recovered through our recycling process and reused as secondary raw materials. Manufacturers, distributors and fillers who place paper sacks on the market can fulfil their statutory take-back and recycling obligations with our system – efficiently and in a customer-friendly way.

How the REPASACK system works:

You agree to the use of a trademark with us.
The REPASACK symbol is a registered trademark and may only be used in combination with a customer-specific registration number. This prevents all forms of misuse. You buy the licence and authorise a paper sack manufacturer to print the REPASACK trademark on your paper sacks.

A REPASACK symbol is available for every industry: it is the "return ticket" for the paper sack.

After being sorted according to product content groups, the paper sacks are sent for material recycling.

Hazardous substances or pollutants? No problem!

To transport products that contain hazardous material in paper sacks, we offer the REPASACK-G system. The "G" stands for "Gefahrstoff", which is the German word for "hazardous material".

Legal certainty for you – **convenience** for your customers

The take-back of your paper sacks is ensured across the board.

REPASACK stands for REcycling-PAper-SACK.
We organise take-back and recycling services for manufacturers, distributors, fillers and consumers who handle kraft paper sacks – i.e., your customers. Whether it is for cement or chemicals, seeds or animal feed, sugar or flour – kraft paper sacks are used in many industries, and eventually have to be disposed. End consumers can dispose their completely emptied REPASACK paper bags free of charge at the approx. 350 acceptance and collection points that we maintain throughout Germany.

At **www.interzero.de/repasack**, your customers can easily and conveniently find their nearest acceptance point. The guidelines with the take-back conditions are available in the download centre on our homepage.

With us, you make recycling into your competitive advantage.

Benefit from the strengths of our take-back system:

- As the market leader, Interzero Repasack is able to offer you more than 35 years experience in the collection and processing of paper sacks.
- At our own recycling plant, we ensure that the paper fibres are processed into a high-quality recycled raw material.
- We offer good value for money: we provide competitive prices and terms for all product categories.

Interzero Repasack GmbH:
Founded in 1992 by representatives of German and European paper/sack manufacturers, the REPASACK system is a pioneer and role model for the successful closing of material and packaging loops in the paper sacks industry. Interzero Repasack GmbH manages the take-back and recycling of used paper sacks under the banner of the Interzero Group of Companies and links them with its wide range of sustainable recycling solutions. In this respect, the prevention of waste and conservation of natural resources are key goals.

Annual reporting documents the resource and greenhouse gas impacts attributed to your recycling activities

Document your **participation in the scheme**

Quality that you can rely on.

We reliably take back your used packaging. This promise is backed up by our consistent quality management. Our integrated management system ensures quality, environmental, energy, occupational health and safety standards which are certified according to DIN EN ISO 9001, DIN EN ISO 14001, DIN EN ISO 50001, DIN ISO 45001 and confirmed by the certificate for waste management companies.

Precise processing according to clear guidelines.

Our REPASACK symbol documents that the disposal, cleaning and recycling of the paper sacks is carried out in accordance with the German Packaging Act. We stand for legal certainty and support you in your compliance with the legal obligations. We certify this to you with our recycling certificate, which provides proof of the legally-compliant recycling.

About Interzero

Interzero is one of Europe's leading environmental service providers for closing product, material and logistics loops and an innovation leader in plastics recycling, with the largest sorting capacity in Europe. Guided by our principle of "zero waste solutions", we advise more than 80,000 customers across Europe on the responsible management of recyclable materials, helping them to collect and process these materials and transparently document their recycling activities.
