

**interseroh**  
zero waste solutions

# We close **logistics cycles**

Intelligent concepts for logistical management  
of your returnable transport packaging  
and transport equipment

# More efficiency with returnable transport packaging

## Added value through added use – reusable transport packaging for higher flexibility

As a leading system service provider for closing product, material and logistics cycles, Interseroh ensures optimised processes along your entire value-added chain. Due to our sophisticated consulting concepts, we will help you to reduce your use of materials and manage your specific flow of materials in a cost-effective and environmentally friendly manner. Our proven system philosophy and implementation of all systematic solutions from one single source will help you in achieving success – also regarding your returnable packaging logistics.

## Improved eco-balance and optimised processes while reducing costs at the same time.

Returnable transport packaging achieves the very highest aims of recycling management: It sustainably saves resources and energy and prevents environmentally hazardous waste. Interseroh will plan and operate the returnable packaging logistics for you. Our logistics management provides the highest degree of transparency

by means of active management and control of returnable transport packaging and transport equipment. In this manner, we provide more flexibility and efficiency for your supply chain – without any hidden costs.

## Concepts in line with individual needs – for your unique success

Reduce your effort by applying our solutions: In collaboration with you, we will develop customised multi-way logistics concepts that will meet your specific demands and will become a strategic success factor.

You will benefit from our individual returnable transport packaging, specifically designed in line with your requirements to transport your goods or the goods of your supplier. Considerable savings in terms of piece

and mileage costs can be generated. Whether you operate from one location or from several locations, our service is available for you throughout Europe, since we will position our service center at the basis of your distribution network. Thereby, we ensure short and efficient transport routes.

# More safety through highest quality standards

## Controlled processes for efficient cycles

At our administration locations and plants, we ensure the very highest quality at all times. For instance, rentable transport packaging is subjected to automated processes of control and cleaning depots, such as:

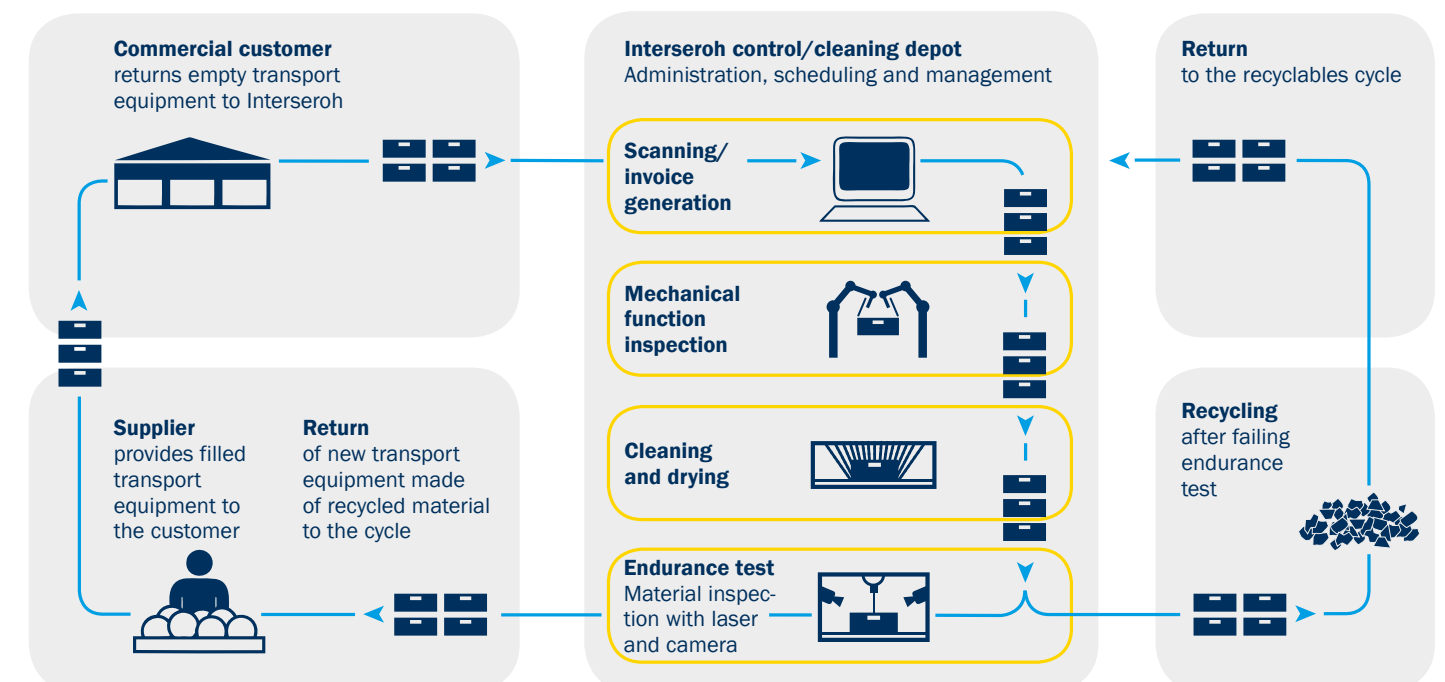

- Entry with subsequent mechanical function check
- Cleaning and drying in line with highest hygiene standards
- Determination of cracks, material fatigue, deformations and wear via state-of-the-art laser and camera technology
- Performance of repair runs

Any equipment that does not pass our endurance tests is recycled and re-admitted into the cycle. Intact equipment is delivered to the supplier for filling and afterwards to the buyer. In the end they are returned empty to our control and cleaning depots, where they go through the entire process once again.

The individual identification of each piece of transport equipment during shipping and receiving enables constant traceability in real-time. In this manner, we ensure the highest degree of transparency of all stocks.

## Real-time administration, scheduling and management

## More options for versatile areas of application

### The perfect solution for any industry – various types of transport equipment for any need

Our high-quality and environmentally friendly returnable transport packaging is depending on the intended purpose available in various sizes such as:

- Standard transport equipment
- Large-sized transport equipment
- Small-sized transport equipment
- Individually designed transport equipment

Many industries, e.g. the automotive industry, benefit from our large-size transport equipment, which enables automated shipment of parts and reduces the enormous amount of work that previously was needed for these processes. Upon request, we can create individual containers adapted to the specific needs and requirements of your company. Due to this customer-specific transport packaging, our returnable transport equipment can be used for several product categories, such as:

- Food (baked goods, meat, fruits and vegetables)
- Hygienic items
- Textiles
- Automotive parts
- Books
- Medication
- Construction materials

We develop appropriate solutions for any requirement – also for your company!

## More benefits for you

### Multiplied benefits – from our returnable packaging system

With an increasing number of containers, the necessity for a professional management of returnable packaging logistics also arises.

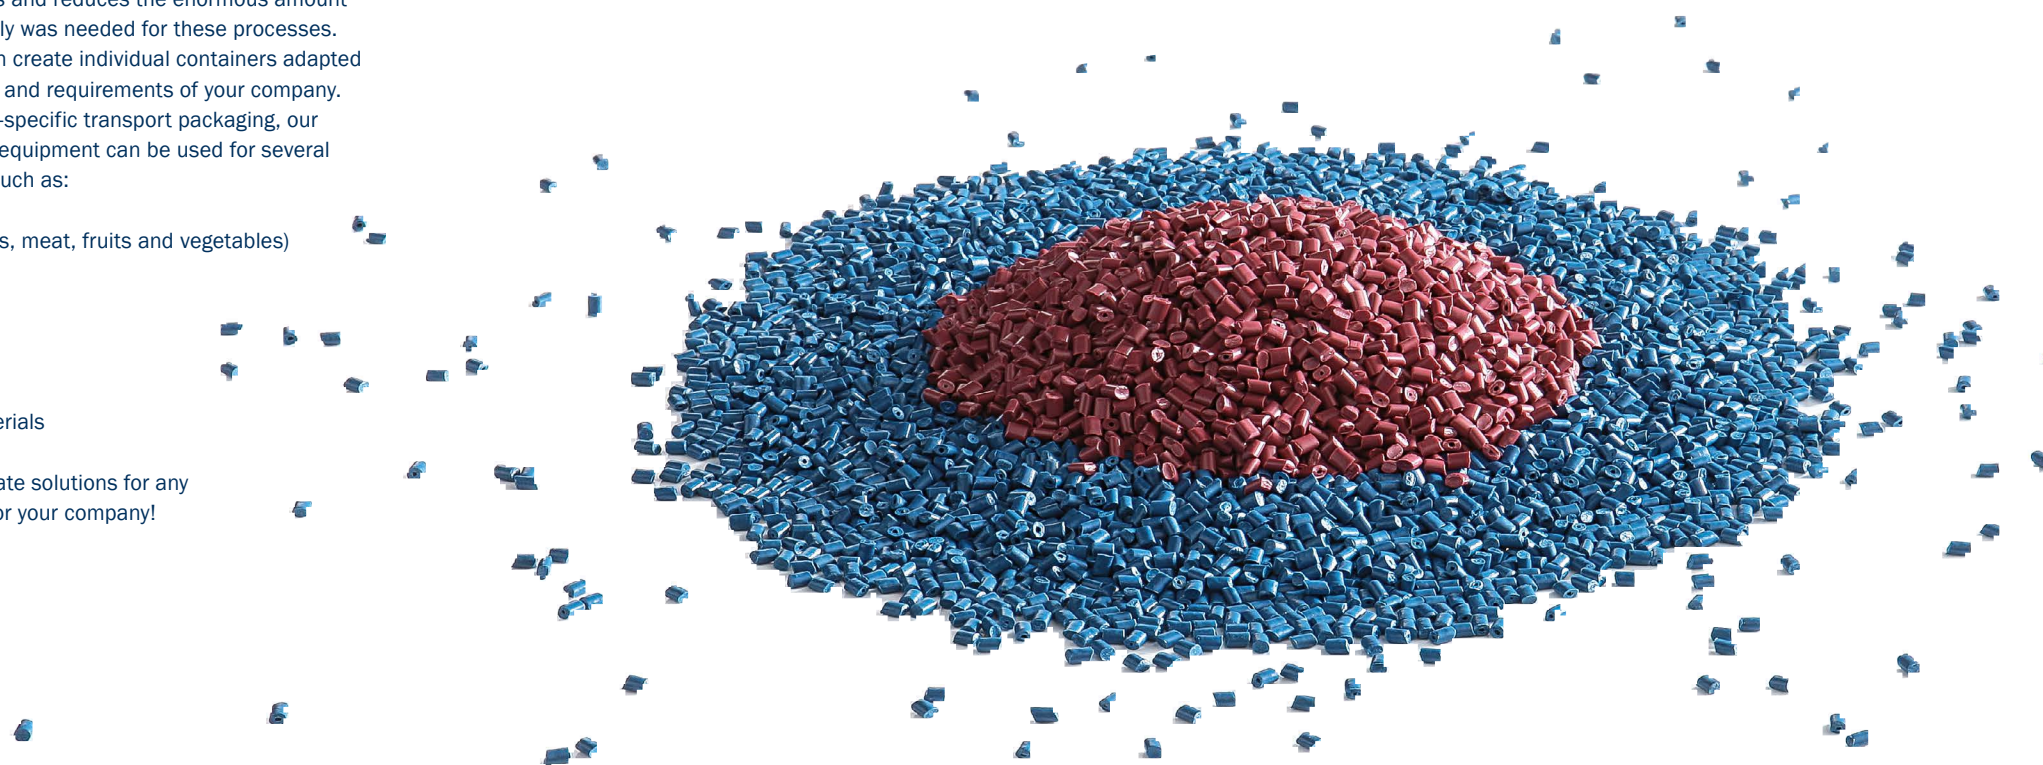

### Improve your supply chain.

Rely on the returnable packaging system from Interseroh and benefit from a wide variety of advantages:

- Reduction of processing costs by an optimised logistics network and a network of transportation resulting in reduction of piece and mileage costs
- Transparency by individual traceability of each asset as well as by active control and optimised stock range of transport packaging
- Quality assurance within the processes and procedures by means of highest hygiene and inspection standards
- Preservation of logistical resources and effective savings of packaging material resulting in protection of the environment

### Recycling granulate Procylen – the raw material of the future

Upon request, we offer individual returnable transport packaging made of our plastic granulate Procylen, which we extract from used materials within our innovative recycling process Recycled-Resource. Thereby, we fully close the recycling cycle.

# Recycling for environmental protection: **Enhance your environmental image with us**

**In offering our return and recycling programme, we make a contribution to the preservation of resources and a positive environment and climate balance.**

Next to ALBA, Interseroh is one brand under the umbrella of the ALBA Group, one of the leading recycling and environmental services companies as well as raw material providers worldwide. In 2015 alone, the ALBA Group was able to recycle approximately 5.5 million tonnes of waste and thus saved around 51.8 million tonnes of primary raw materials. With its sustainable actions and innovative recycling processes, Interseroh also makes a considerable contribution to the protection of the environment and climate.
